

NEW DEVELOPMENT FOR GSA BALING PRESS

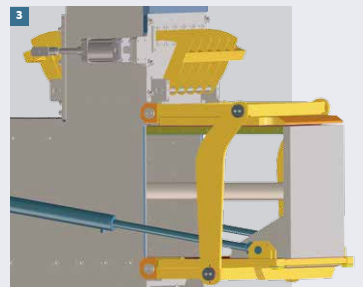

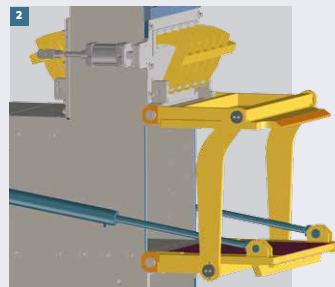

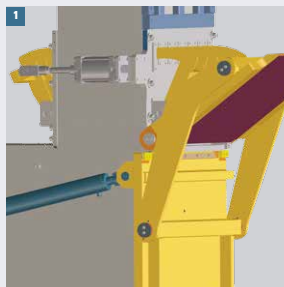

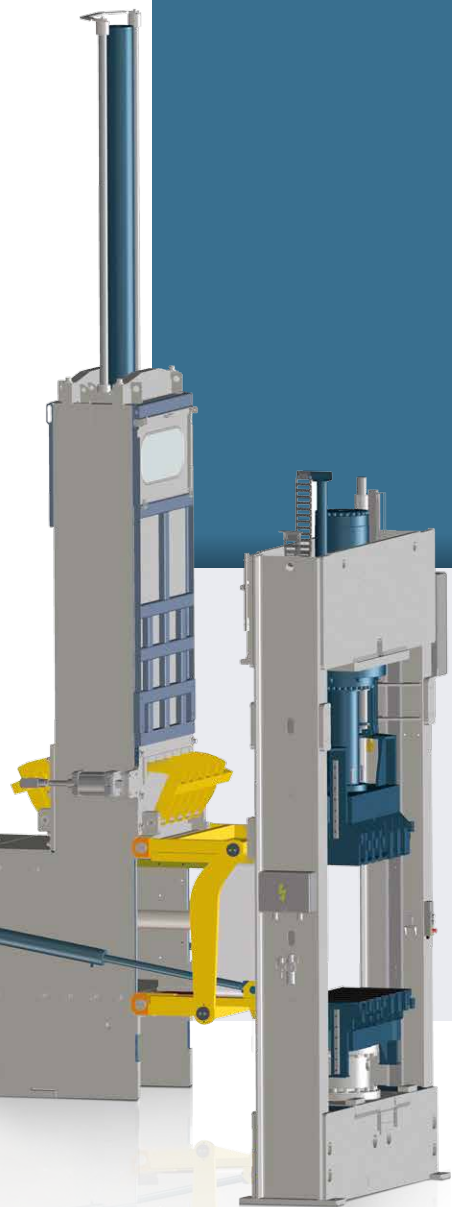

Gualchierani developed the GSA baling press to produce a simple, operator-friendly machine, with a high production capacity.

- 1** To improve the concept and increase the capacity, the moveable bottom plate was replaced by a double door.
- 2** When the 2 doors open, we create a “tunnel” allowing to push out the pre-compacted bale from the pre-press to the main press.
- 3** A hydraulic pusher transfers the bale to the main press for finishing.
