

# NEW WRAPPING SYSTEM FOR GSA BALING PRESS

Gualchierani Baling Systems nv is proud to announce the development of a new automatic wrapping system for the **GSA baling press**.

With this new system it will be possible to use **any type of wrapping material** (normal PE or PP sheet, woven PP, hessian cloth...) as the wrapping system doesn't require any welding. The high speed of this new wrapping system results in an increased baling capacity of the press up to **50 bales/hr**, depending on the accessories and type of the fiber.

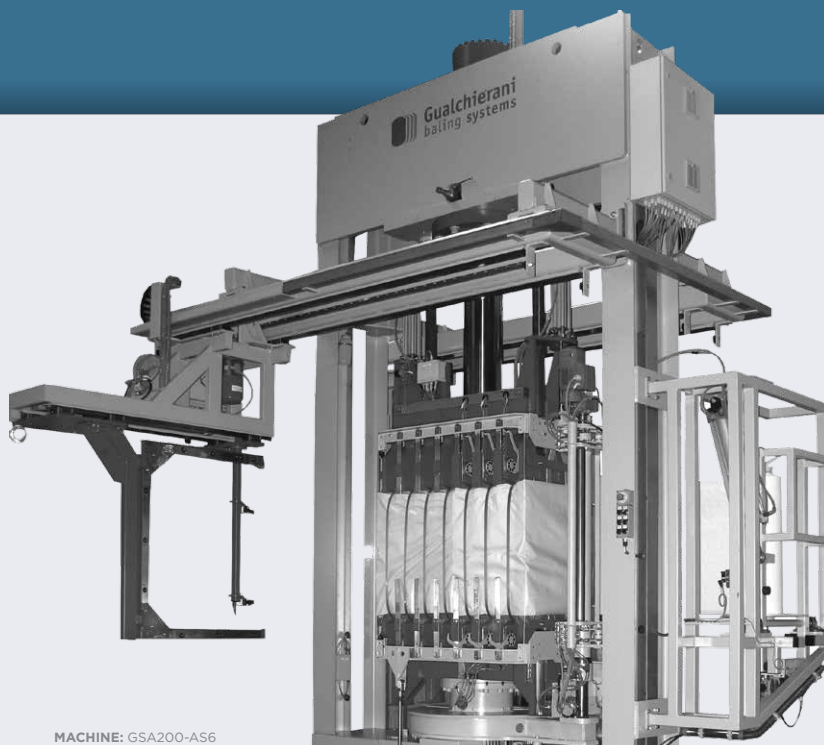

More than **100 installations** all over the world, from manual to fully automatic, prove that this machine remains a huge success.

Besides this new development Gualchierani Baling Systems can of course still supply a GSA baling press with :

- manual wrapping and strapping
- manual wrapping + automatic strapping
- automatic 4-sided wrapping + automatic strapping
