

Fibersort™

Valvan Baling Systems updated the Fibersort™.
The Fibersort™ technology predicts very accurately
the fiber composition of textiles.

USP #01

Can sort on: fiber +
color + woven/knitted

USP #02

Fully automatic

USP #03

1 piece/second

Fibersort™

Fibersort™ can sort on fiber
+ color + woven/knitted
at one piece/second

• • •

Additionally a robot system
can automatically feed
the fibersort.

Fully automatic

Manual inspection of textiles belongs to the past.
The sorting process based on material properties
is now fully automatic.

A high-tech detection unit together with smart
algorithms combines the information of multiple
sensors to classify textiles based on your needs.

The Fibersort™ can now sort all textiles based
on following properties in as many categories
as you desire:

- Fiber composition (i.e. 100%PET, 70%PET 30% Cotton, ...)
- Color
- Woven VS knitted
