VALVAN

AI-powered pricing and item tracking for used textiles

Hypersort®

Price consistently.
Move faster.
Achieve full traceability.

Hypersort is Valvan's AI technology for pricing and item tracking in used textiles. Use it as software at your current workstations, as a camera workstation, or as part of a complete automatic sorting line.

What you get

- **Consistent pricing** across operators and locations
- **Real-time analytics** performance dashboards
- **Item-level traceability** a QR code on every item

1 Hypersort Connect — Software

Support your pricers and capture the item information.

1. **Pricer enters item** — category, brand, condition
2. **AI suggests the price** — based on your pricing model
3. **QR label per item** — linked to its pricing data
4. **Live dashboard** — across operators and locations

- Works on your current workstations
- Faster brand selection
- Less revenue lost to underpricing
- Pricing that keeps improving with data
